

BKP UV SYSTEM

RSM Lining Supplies Global Ltd have partnered with BKP Berolina for the supply of UV liners. The BKP system has DIBT and WRc approval.

BKP Berolina Polyester GmbH & Co. KG is a worldwide technology leader in providing UV-cured glass-fibre reinforced plastics, GRP and Cured In Place Pipe (CIPP) lining systems for trenchless rehabilitation of pipelines and culverts.

The light curable liner is tailor-made for each application. The cured liner belongs to the group of reinforced CIPP. High E-modulus enables superior liner stiffness: this ensures maximum flow capacity with minimal cross-section reduction.

With a rapid installation time that keeps disturbance to the environment at a minimum, traffic flow, social and commercial life remain virtually unaffected.

Key facts:

The Berolina-Liner System has been successfully installed in all 5 continents, starting commercially in 1997, with our closed linked business partners around the world.

The Berolina-Liner system has served the British market for more than 10 years, with a worldwide installed volume close to 3.000 km.

The chemical resistant glass fibre reinforced liners are available in diameters ranging from 150 mm (6 inch) to 1600mm (63 inch).
